# Laptop storage cabinet

„We have a requirement for a lockable, theft-proof cabinet that stores up to 20 laptops. Ideally, it's easily movable and able to re-charge the units overnight.“ (Swedish School Board)

### Key features

- Storage of small computer system
- Mobile
- Lockable
- With sockets for charging

### The challenge

- Theft-proof
- Enough room for all the laptops of the class
- Conveniently transportable to another classroom
- Laptops should be able to charge overnight

### Product description

A cabinet based on the hawa catalog products. The cabinet includes 10 shelves - with space for 20 laptops. A thermostat-controlled filter fan is preventing overheating of the laptops. The cabinet can easily be transported to other classrooms on it's mounted rollers.

### Solution

#### Racks

Racks out of the hawa catalog form 10 shelves in the cabinet. Each level has room for 2 laptops.

#### Ventilation

A filter fan in the roof and an exhaust filter in the door protect the laptops from overheating.

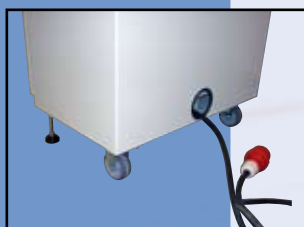

#### Thermostat

A thermostat controls the filter fan for optimum temperature control.

#### Power sockets

On each of the 10 shelves, 2 sockets (1 left and 1 right) are installed. Each level therefore providing power for 2 laptops.

#### Mobility

Rollers on the rear of the cabinet. The cabinet can be tilted back for transport. Leveling feet on the front of the cabinet, provide a secure stand.

## When a customer needs more than a standard control cabinet off the shelf.

No customer requires just a standard control cabinet, as shown in the catalog. The applications are far too different. Most of the time, an individual solution is required, where the cabinet is customized for the specific application.

These customizations include special cut-outs, additional holes for mounting or cable insertions, pre-installed options, or custom colors.

The four different paths from A to D categorize the various forms of individualization:

- Route A** In this case represents the classic warehouse and catalog program that applies to the customer, who likes to put everything together himself. The customer even takes the selection of the customization of components on himself. A sensible control cabinet concept is complete but not cluttered.
- Route B** Describes cabinets, although still mostly consisting of warehouse components, but with individual customized components, e.g. customized cut-outs, or color. It represents a logical development for the installation of cabinet systems with no additional effort. Also available in standard red color..
- Route C** Cabinets with customed dimensions (higher, wider, narrower/wider doors, or special pedestals). Often in demand in machine building.
- Route D** The „ready designed cabinet“ is abandoned – a completely customized solution is developed. These projects normally start „back at the machine“ for which they are intended. Dimensions, accessibility, protection class, load capacity, and cooling requirements, as well as the interior layout of the system – everything is planned individually. In conjunction with a logistic concept, which ensures a short delivery time, the best solution for the customer is ensured.
