

Mount a "pointer" to the depth stop for easy reading of the edge distance when punching.  
It simply works as an extension of the "read-off edge" of the stop. Regarding the measuring scale at right angles, you can read the exactly adjusted dimension at the right side of the pointer.

Tap two M4 threads in order to mount the pointer at the depth stop.

#### Operating Instructions:

1. Check with the mounted depth stop, if the threads can be tapped in the flat material according to the above drawing.  
(Note: drilling of the pointer =  $\varnothing$  5 mm; screw = M4)
2. Disassemble the stop and mark as shown in the drawing (if necessary, correct the position slightly - see item 1)
3. Pre-drill the hole with  $\varnothing$  3.3 mm and tap the M4 thread approx. 10 mm deep.
4. Pre-mount the pointer with the two supplied M4x10 screws.
5. Mount the stop and clamp it to the bow punch.
6. Adjust the pointer at a distance of approx. 0.5 mm to the measuring scale and tighten the screws.
